VitalVit B is a fertilizer based on hydrolyzed proteins and Boron to prevent or correct nutrient deficiencies that may limit crop growth, yield and/or quality. Suitable for use on all organic and conventionally produced plants.

VitalVit B can be applied by ground or aerial application as a spray or through a drench, drip, micro emitter or other irrigation application. It is nontoxic to most plants when applied as directed. For best results apply VitalVit B according to recommendations based on plant tissue or soil analysis for a given crop. Soil deficiency must be documented by testing.

MIXING/USE INSTRUCTIONS: Mix well in the desired amount of water for a single application. VitalVit B is compatible with most other fertilizers and plant nutrients. It is recommended that a physical and plant compatibility test be conducted before use. A physical mixing test using small quantities in proportion to field application rates is recommended. Perform a phytotoxicity test on a small plot before large scale application. To lower the risk of phytotoxicity applications should be made early morning or late evening.

DIRECTONS FOR USE:

CAUTION: this product contains boron. Do not apply to boron sensitive crops. Do not apply to crops that will be grazed by ruminant animals. Use only according to manufacturer's directions. Apply in sufficient water to uniformly cover the desired area. Use of a wetting agent is not normally needed. The application rate and timing will depend on the crop, stage of growth, environmental conditions and severity of deficiency. Higher use rates are needed for larger plants and more severe deficiencies. Multiple applications can be made as needed based on tissue and soil analysis for a given crop.

VitalVit B can be applied to all crops including broad acre and row crops, vegetables, fruit trees, vines and tree nuts. **WARNING: Check for crop compatibility in a small area before wide scale use. To lower the risk of phytotoxicity, applications should be made early morning or late evening.**

FOLIAR APPLICATIONS: Apply 1/2 to 1 pound per acre. Apply to plant foliage to the point of runoff throughout the growing season as needed. On vegetables, field and row crops, apply when plants are 8-12 inches in height, continue applications every 14 to 28 days as needed.

SOIL APPLICATIONS: Apply 1-2 pounds per acre through a drip system or injected into the soil. This product can be mixes with pre plant and side dress fertilizers.
