Grower's Secret Soluble Corn Steep Powder can be used in organic and conventional crops. It can be applied by ground or air to plants, through drench, drip or flood irrigation on soil to prevent or correct nitrogen, phosphorous or potassium deficiencies. For best results, apply Grower's Secret Soluble Corn Steep Powder according to recommendations based on plant tissue, plant sap or soil analysis for a given crop.

MIXING INSTRUCTIONS: Mix well in the desired amount of water. Grower's Secret Soluble Corn Steep powder is believed to be compatible with most fertilizers and plant nutrient products. When mixing with other products it is recommended that a physical compatibility test be conducted before use. A test using small quantities in proportion to field application rates is recommended.

DIRECTIONS FOR USE: Apply 2-20 pounds per acre when plants are actively growing or as needed based on your nutrient management program determined from soil and plant tissue analysis or sap analysis for your specific crop. This product is a commercial fertilizer and should be used as part of a comprehensive nutrient management program.

If mixing with other products always perform a small jar physical compatibility test and a phytotoxicity test on a small part of the field before large-scale applications.

Lawn and Garden: Mix 2-4 Tablespoons per gallon of water. Apply as a foliar spray, soil drench, or through irrigation systems every 2-4 weeks or as needed.

Recommended rates are intended as a guideline only and may not be suitable for all regions, conditions, and crops. Specific application rates should be determined from crop and soil analysis.

Do not apply near water, storm drains, or drainage ditches. Do not apply if heavy rain is expected. Apply only to the intended application site. Any material that lands on an impervious surface must be swept back onto the turf.
