Grower's Secret Phosphorus Fertilizer is a mined fertilizer used for the correction of phosphorus deficiencies in organic and conventional food production. It can be applied to prevent or correct phosphorus deficiencies which can negatively affect root development, fruit and flower production, plant growth and yields. For best results apply Grower's Secret Phosphorus Fertilizer according to recommendations based on plant tissue or soil analysis for a given crop.

**DIRECTIONS FOR USE:** Can be applied as a spray to the soil or as a dry powder. Avoid foliar applications when plants are under heat or drought stress. Constant tank agitation is needed during application if applied as a liquid.

Check your equipment operating instructions for application settings if needed. Application rates should be determined based on soil and foliar analysis of a given crop.

If applying with acidifiers or other products, always conduct a small jar compatibility test with representative quantities of mix products and water. Always perform a phytotoxicity test on a small part of the field before large-scale applications.

**Lawn and Garden:** Apply 2-5 pounds (0.9 to 2.3 kg) of fertilizer per 100 sq ft (9 sq m) of the soil surface and work into the top 3 inches of soil.

Recommended rates are intended as a guideline only and may not be suitable for all regions, conditions, and crops. Specific application rates should be determined from crop and soil analysis.

Do not apply near water, storm drains, or drainage ditches. Do not apply if heavy rain is expected. Apply only to the intended application site. Any material that lands on an impervious surface must be swept back onto the turf.
